## LED Interactive Light Panel

- Motion passing by the panels, activates sensors, and turns the LEDs on, which then turn off as the object passes by
- 12" x 12" panels easily plug into one another
- 2 male and 2 female connectors are on each panel - one located at the center of each side
- Create your own "grid" configuration as long as the connectors fit together
- Up to 12 panels can be powered off of a single power supply
- If more panels are needed, simply begin another circuit and add another power supply
- Panels can be mounted to substrates with 1/2" set off in horizontal or vertical configurations
- Facing material can be clear or frosted or can work with many fabrics too
- Ideal for table tops, top or front of display stands, back walls, floors and more

### Product Advantages:

- Easy way to allow passing motion to activate light
- Built-in connectors allow for a wide variety of mounting configurations

### Sample configurations include:
